

**Amendments to the Claims:**

Entry of the following amendments to place the claims into condition for allowance is respectfully requested.

1-7. (cancelled)

8. (currently amended) A web access providing system via a switching system comprising:

connection request sending means for sending a request to connect a Web page associated with a called subscriber terminal by a calling subscriber terminal using at least one call provided in one communication channel based on multiple access technology;

authentication means for performing authentication of a subscriber number of said calling subscriber terminal in response to said call;

Uniform Resource Locator (URL) sending means for sending a Uniform Resource Locator (URL) to connect the call to the Web page associated with said called subscriber number stored in said called subscriber terminal depending on a result of said authentication by said authentication means; and

switching means provided in the switching system for receiving said Uniform Resource Locator (URL) and outputting a connection request to connect the call to the Web page,

wherein access to the Web page ~~the URL of which~~ to which the URL is assigned beforehand by the user of the called subscriber terminal is granted only if an access code, which determines whether the call is requesting a voice

conversation or access to a Web page, is added to the telephone number of the called subscriber terminal.

9. (currently amended) A Web access providing system via a switching system comprising:

connection request sending means for sending a request to connect a Web page associated with a called subscriber terminal by a calling subscriber terminal using at least one call provided in one communication channel based on multiple access technology;

authentication means for performing authentication of a subscriber number of said calling subscriber terminal in response to said call;

Uniform Resource Locator (URL) sending means for sending a Uniform Resource Locator (URL) to connect the call to the Web page associated with said called subscriber number stored in said called subscriber terminal depending on a result of said authentication by said authentication means; and

switching means provided in the switching system for receiving said Uniform Resource Locator (URL) and outputting a connection request to connect the call to the Web page,

wherein the authentication by said authentication means verifies that the subscriber number of said calling subscriber terminal is contained in a subscriber number list associated with said called subscriber terminal and access to the Web page ~~the URL of which~~ to which the URL is assigned beforehand by the user of the called subscriber terminal is granted only if an access code, which

determines whether the call is requesting a voice conversation or access to a Web page, is added to the telephone number of the called subscriber terminal.

10. (previously presented) The web access providing system according to claim 8, wherein said authentication is performed in said called subscriber terminal.

11. (previously presented) The Web access providing system according to claim 9, wherein said subscriber number list is a telephone directory stored in said called subscriber terminal.

12. (previously presented) The Web access providing system according to claim 9, wherein said authentication is performed in said called subscriber terminal.
